

Money word problems

Grade 4 Word Problems Worksheet

1. Tyler saved \$32.80 from his school allowance. He bought 2 superhero action figures which cost a total of \$7.90 and a toy robot for \$8.70. How much does he have left?

2. Annie bought 2 curtains for \$3.70 each and 3 flower vases for \$2.40 each. At the counter, she paid the cashier and received change of \$5.40. How much money did Annie give to the cashier before she received her change?

3. Patricia saves \$8.70 every month from her salary. How much money can she save in 3 months?

4. The fourth-grade school pupils collected a total amount of \$124.90 during their three-week fundraising campaign. They collected \$38.70 during their first week and another \$56.20 during the second week. How much did they collect in the third week of their campaign?

5. Francine saves money to buy a novel every month. This month, she wants to buy a Percy Jackson book worth \$21.60. Her father already gave her \$7.60. How much should she save each day if she is going to buy that novel book after 7 days?

6. Joseph bought 5 loaves of bread for \$15 and 2 boxes of cheese for \$2.80. How much does each loaf of bread cost?

Answers

- $\$32.80 - \$7.90 - \$8.70 = \16.20
Tyler has \$16.20 left.
- $2 \times \$3.70 = \7.40
 $3 \times \$2.40 = \7.20
 $\$7.40 + \$7.20 + \$5.40 = \20
Annie gave the cashier \$20.
- $\$8.70 \times 3 = \26.10
Patricia can save \$26.10 in 3 months.
- $\$124.90 - \$38.70 - \$56.20 = \30
The grade school pupils collected \$30 in the third week.
- $\$21.60 - \$7.60 = \$14$
 $\$14 \div 7 = \2
Francine must save \$2 per day.
- $\$15 \div 5 = \3
Each loaf of bread costs \$3.
