Answers

air food needs place roots seeds
reproduce stem sunlight support water

Different parts of plants help them meet their needs to live, grow, and reproduce.

A plant's roots take in water and nutrients. They also help hold the plant in place.

The stem or trunk helps carry water and nutrients to the rest of the plant. It also helps support the plant.

Plants take in air and sunlight through their leaves. They turn it into food.

Flowers produce seeds. They allow the plant to reproduce.
